

Dear Dra. Ana Cláudia Delciellos,

Please, enclosed is a submission to the Report section of the Journal *Oecologia Australis*, entitled "Large and medium-sized mammals in the campus of the Universidade Federal de Lavras, Minas Gerais, Brazil: changes of 2008 to 2016."

This study presents information about the medium and large mammal community on the UFLA campus in two different periods (2009 and 2016). This information is relevant because it shows that these areas harbor important species, including endangered species, as well as subsidize management actions within UFLA to minimize impacts on biodiversity. This study is written in the research article format.

This work was approved for all authors, we do not submit this article for publication in another journal and it is not already published elsewhere.
