

Greetings to the first edition of 2024, marking the impressive 75-year journey of the Revista Brasileira de Neurologia (RBN).

During this time, under the leadership of a number of dedicated editors, RBN has faced and overcome numerous obstacles, including the shift to digital publishing.

The present edition features six articles that showcase the latest advancements and research in neurology, as well as of historical issues in this area of study. The articles provide a unique perspective on various neurological aspects, reflecting the journal's commitment to advancing knowledge and clinical practice.

- The first article examines the correlation between COVID-19 and post-infection ischemic stroke, providing a comprehensive review of the literature on this critical topic.
- Next comes a paper that takes a forward-looking perspective on how the integration of health humanities, neurobiology, and digital technology can enhance neurology practice and education, promoting better patient care and provider well-being, is presented.
- How different needle gauges and shapes impact the occurrence of post-dural puncture headaches, providing essential data for improving clinical procedures and patient outcomes, is also investigate.
- Moreover, a paper that explores the history of medicine and the integration of neuroscience, psychiatry, neurology, and humanities is presented. It highlights how interdisciplinary approaches enhance patient-centred care and overall understanding of health, emphasizing the need for holistic practices in modern healthcare.
- Furthermore, the historical contributions of pioneering scientists such as Alois Alzheimer and Oskar Fischer to our understanding of Pick's complex, shedding light on their enduring impact on modern neurology, is examined.
- Finally, the work of Emil Redlich on plaques of senile atrophy of the brain, providing a historical context that enriches our understanding of neurodegenerative conditions, is revisited.

We hope you find this issue informative and engaging as we continue to document and celebrate the rich history and ongoing clinical advancements, as well the historical aspects, in the field of neurology.

Thank you for being part of our journey.
